I'm a passionate frontend developer with a keen eye for creating engaging and responsive user interfaces. Proficient in HTML, CSS, JavaScript, and React js, I thrive on turning design concepts into interactive and visually appealing web experiences. Constantly evolving with the latest web technologies, I aim to deliver seamless and intuitive interfaces that enhance user satisfaction. Let's build user-centric and dynamic websites together!

Experience

Weather web site

- This is a simple and useful web application that displays weather information. Users can enter city name and get information like current temperature, weather condition, humidity, wind speed. The site has a dynamic interface, and the background images change depending on the weather conditions. Technologies like HTML, CSS, React js and OpenWeatherMap API are used. Hosted on the Netlify platform.

Pomofocus

2017 - present

- A time management tool based on the Pomodoro technique. Users can set work and break times, start and clear the timer. The site has a minimalistic design, an interactive interface and is optimized for mobile devices. Technologies like HTML, React js, Chakra UI and Netlify hosting are used. Helps to focus, manage time effectively and increase productivity. A simple, fast and useful tool.

Portfolio

- My portfolio site is mainly designed to provide information about myself. It contains information about the technologies I know, the projects I have done, and the places where I have worked.

Education

High School   *2013 - 2024*

University of Science and Technologies   *2024 - Present*
- Bachelor of Science, Software engineering
